## WHAT I DO

I specialize in designing and building web apps using the latest and greatest of CSS, HTML, and JavaScript. I've spent much of the past 2 years specializing in JavaScript programming on the front and back-end, using my creative background to create intentional, engaging experiences for people on any device or platform that are also clean and maintainable. I work quickly and efficiently by using preprocessors for my projects such as SCSS, Grunt, and Bower.
